

»Fliegl« hose container

Tractors and tanker wagons of contractors that work with different liquid manure reservoirs must have the right hose for each connection on board to cover the distance between the reservoir and the on-board tank. In the new hose container from the Fliegl Agro-Centre, adapter hoses and couplings can be conveniently stowed and reliably routed from A to B.

The fully galvanized box is attached to the tractor by means of a three-point hitch cat. 2. Of course the container is suitable for more than hoses. It is also ideal for taking equipment for forestry work such as chain saws or chains to where they will be used, etc.
