

Illustration with three-point hitch (available for a surcharge)

Deflectors, guide plate 3 parts.

Electric universal spreader »VT 2.9«

Main use: Catch crops, fertilizer and micro-granular compound, grassland reseeding, slug pellets, also for silage additives

The spreader can always be operated by the 12-volt drive, independently of other drives such as cardan or hydraulics. Two steps in one - saves you time and money!

- Drive - 12V motor (170 W)
- Spread width: 2-24 m (continuous regulation)

Control panel: • Spreading discs On/Off • Pusher Open/Closed
 • Spreading plate speed More/Less

Standard equipment: • Powder-coated frame • Plastic tank with 90 litres • Operated from the tractor at the control panel while driving
 • Electrically driven spreading disc with adjustable vanes • Tank lid
 • Power supply cable 3 m long • Attachment cable 6 m long
 • Control panel • Clamping sleeves for grass
